25 ug of various mouse tissue lysates and HEK293 cell lysate were subjected to SDS-Page, transferred to nitrocelluose and immunoblotted with anti-PTPL1 (1363 – 2060) at 1 ug/ml.

Binding of the primary antibody was detected using rabbit peroxidase conjugated antisheep IgG antibody (1 in 10, 000 dilution, Pierce) followed by enhanced chemiluminescence (ECL, Amersham).
